

CURRICULUM VITAE

Mirianas Chachisvilis

Education

- 1997-2000 **PostDoc** (Chemical Physics), **California Institute of Technology**, Pasadena, CA.
1996 **Ph.D.** (Chemical Dynamics), **Lund University**, Lund, Sweden.
1988 **M.S.** (Physics), **Vilnius University**, Vilnius, Lithuania.

Work Experience

- 2013 – present **VeriSkin, Inc., Co-founder, CEO and CTO**
Invented and developed a novel technology for a rapid and non-invasive screening for skin cancer.
- 2012 – present **Solvexa, LLC, Founder, CEO and CTO**
Development of new technologies for chiral separations.
- 2004 – 2014 **Chief Scientific Officer** (acting), **Dynamic Connections LLC**
Proof of principle evaluation of new technologies: (1) New chiral separation technology; (2) quantum chemical and molecular dynamics simulations of molecular dynamics in time-dependent electric fields; (3) Molecular ratchets; (4) statistical thermodynamics - thermal energy extraction; (5) Advanced electrophoretic separation technologies; (6) Managed activities for NIH Phase I/II SBIR grant aimed to investigate and develop a novel chiral separation technology.
- 2004 – 2013 **Assistant Professor**, March 2007 - **Associate Professor, La Jolla Bioengineering Institute**, La Jolla, CA. Research work on the molecular mechanisms of mechano-chemical signal transduction in cells. Time-resolved fluorescence spectroscopy and imaging of GPCR, and G protein conformational dynamics in cells and lipid bilayers using FRET. Time resolved FRET studies of the dynamics of bradykinin receptor, PTH receptor, PECAM, eNOS and secondary intracellular messengers (Ca^{2+} , cAMP) in response to fluid shear stress stimulation. Fluorescence correlation spectroscopy and time-resolved fluorescence studies of lipid diffusion (membrane fluidity), membrane polarity (hydration) and membrane dipole potential in cell membranes and artificial lipid bilayers (liposomes and supported lipid bilayers) under mechanical stress. Effects of polyunsaturated fatty acids on GPCR conformational dynamics and function. The work also involved building up a new laboratory for femtosecond time-resolved fluorescence spectroscopy and imaging of live cells at LJBI and setting up a computational core for molecular dynamics simulations.
- June 2001 – May 2004 **Senior Staff Scientist, Genoptix, Inc. (a Novartis Company)**, San Diego, CA
Research work in the areas of biophotonics, optical tweezers, radiation pressure forces and elastic light scattering on single cells, flow cytometry, optical force based, label-free cell discrimination and sorting, particle dynamics in optical fields and in microfluidic channels as applied to single cell analysis (for cancer diagnostics). The work involved building complicated optical imaging systems for

studying interaction between laser beams and live cells as well as theoretical analysis.

2000 – 2001 **Research Assistant Professor**, Department of Chemical Physics, **Lund University**, Sweden. Fundamental non-equilibrium chemical dynamics in complex systems. Applications of femtosecond- and single molecule spectroscopies to study energy conversion processes in artificial photosynthetic systems inside protein nanocavities.

1997 – 2000 **Postdoctoral Scholar, California Institute of Technology**. Ultrafast chemical reaction dynamics in the gas and condensed phase. Advisor: A. H. Zewail, **1999 Nobel Laureate in Chemistry**. Applications of femtosecond fluorescence up-conversion and transient absorption techniques to study double proton transfer in solution, and isomerization, dissociation-recombination and electron transfer reactions inside nanocavities. Experimental and theoretical studies of elementary chemical reactions and the role of microscopic friction using femtosecond LIF spectroscopy and ultrahigh pressure techniques. Studies of deactivation of the excited states via conical intersections and valence isomerization processes of azabenzenes in condensed phase using femtosecond transient absorption and *ab initio* methods. The work also involved setting up a new lab for fluorescence up-conversion and transient absorption spectrometers.

1994 – 1996 **Graduate Research Assistant**, Department of Chemical Physics, Chemistry Center, **Lund University**, Lund, Sweden.

1993 - 1994 **Graduate Research Assistant**, Department of Physical Chemistry, **Umeå University**, Sweden. Transfer of the research group to Lund in 1994. Excitation energy dynamics in photosynthetic and model systems. Experimental and theoretical studies of excitation energy transfer, vibrational and electronic coherence and relaxation processes in photosynthetic antennae of purple bacteria using femtosecond spectroscopy in combination with exciton theory and density matrix methods. First time observation of vibrational coherence and estimation of exciton coherence length in LH1 and LH2 light harvesting complexes. Studies of isomerization and excited state deactivation of porphyrin dimers in solution and exciton-exciton annihilation in phthalocyanine colloids and films. Application of quantum chemical calculations for data analysis. The work also involved setting up and using three different femtosecond transient absorption spectrometers, including development of advanced data acquisition software (currently used by at least four research groups).

1988 – 1992 **Research Assistant, Institute of Physics**, Laboratory for molecular processes, Lithuanian Academy of Sciences, Vilnius, Lithuania. Nonlinear picosecond spectroscopy: Experimental studies of nonlinear resonances and exciton dynamics in molecular crystals using four-wave mixing, CARS, transient absorption and transient gratings techniques.

1986 – 1988 **Research Assistant**, Physics Department, **Vilnius University**, Lithuania. Undergraduate research work in applied theoretical physics. Applications of singular integral equations to boundary problems in electrodynamics: developments of methods and computer programs.

Graduate and Postdoctoral Advisors

Graduate Advisor: **Prof. Villy Sundström**, Lund University, Sweden.

Postdoctoral Advisor: **1999 Nobel Laureate Prof. Ahmed H. Zewail**, California Institute of Technology, Pasadena, CA.

Awards and Honors

- 1996 **Prize for the best Ph.D. thesis in chemistry in Sweden** awarded jointly by The Swedish Chemical Society (Kemistsamfundet) and The Swedish Association of Scientists (Sveriges Naturvetareförbund).
- 1996 Post Doctoral Fellowship awarded by The Swedish Foundation for International Cooperation in Research and Higher Education (STINT).
- 1999 *Wilhelm Faxes* prize awarded by Lund University.

Research Funding Awards

1 R44CA203038-01A1 (PI: Chachisvilis, M.) 5/1/2016 – active
NIH/NCI: Hemodynamic Noninvasive Skin Cancer Diagnostics.
Total (direct + indirect): \$1,898,779.00
The main goal of this project is to develop a non-invasive skin cancer diagnostic device.

1R43GM119431-01 (PI: Chachisvilis, M; Kodis, G.) 9/16/2016-active
NIH/NIGMS: Chiral separation and analysis by molecular propeller effect
Total (direct + indirect): \$296,418
The goal of this project is to test a new method for chiral analysis and separation.

1 R01 HL86943-05 (PI - Chachisvilis) 4/04/2007 – 3/31/2013
NIH: Mechanosensitivity of Cell Membranes: Role of Lipid-Protein Interactions
Total (direct + indirect): \$2,130,750.00
The central hypothesis is that the plasma membrane of endothelial cell acts as a mechanosensitive element; i.e. changes in the physical properties of the membrane under mechanical stress can regulate activity of membrane proteins coupled with intracellular signaling pathways.

R01 HL086943-05S1 (PI - Chachisvilis) 09/01/2010 - 03/31/2013
NIH: Mechanosensitivity of Cell Membranes: Role of Lipid-Protein Interactions
Total (direct + indirect): \$313,992
This is a Postdoctoral Research Supplement to Promote Diversity in Health-Related Research for Dr. Jose Candelario who is a postdoctoral fellow in PI's group.

R01HL086943-03S1 ARRA (PI - Chachisvilis) 7/15/2009 – 6/30/2012
NIH: Mechanosensitivity of Cell Membranes: Role of Lipid-Protein Interactions
Total (direct + indirect): \$382,064
This is a ARRA supplement to add computational modeling capability to R01 HL86943.

5R44GM103405 (PI – Osman Kibar, acting PI - Chachisvilis) 1/1/2012 – 12/31/2014
NIH: Hydrodynamic chirality: a novel method for chiral separation and analysis.
Total: \$1,260,702.00
The primary objective of this project was to demonstrate feasibility and develop a novel chiral separation technology. Acting PI was fully responsible for project management.

MCB 0721396 (PI - Chachisvilis) 9/01/2007 – 2/28/2010
NSF: The Role of Dipole Potential in Mechanosensing
Total: \$200,000.00

The primary objective of this project focuses on understanding the role of dipole potential of the lipid bilayer membrane in mediating mechanochemical signal transduction in live cells.

TG-MCB100143 (PI - Chachisvilis) 2010 – 2012 (extendable)
1,500,000 SU on TACC Sun Constellation Cluster (Ranger)
500,000 SU on NCSA Linux Cluster (Abe/Queen Bee/Steele)

NSF Teragrid/XSEDE Resource Title: Mechanosensitivity of Lipid Bilayer Membranes.
This award provides access to computational resources for molecular dynamics simulations.

Dnr 96/219 (PI - Chachisvilis) 1997 – 2000
The Swedish Foundation for International Cooperation in Research and Higher Education
(**STINT**): Femtosecond reaction dynamics in the phase transition region.
Postdoctoral fellowship.

K 620-288/2000, K 5104-2698/1999 (PI - Chachisvilis) 3/6/2000 -9/21/2001
Swedish Natural Science Research Council: Fundamental Nonequilibrium Chemical Processes in Complex Systems.
Total: \$120,000.00
Research and equipment grant.

Professional Associations

1998 - present American Chemical Society.
2006 Biophysical Society.

Teaching Experience

1997 Series of lectures for junior graduate students on various methods and techniques of time resolved femtosecond spectroscopy at Lund University.
2000 Graduate course on Photochemistry and Spectroscopy at Lund University.
2001 Graduate Course on applications of lasers to spectroscopy within Lund Laser Center.
2003-2004 Lectures on light scattering in biology for bioengineering class at UCSD

Master Thesis Co-Advisor:

(1) Dakota Watson, La Jolla Bioengineering Institute, La Jolla, CA;
(2) Valeria Liverini, Dept. of Physics, Swiss Federal Institute of Technology, Zürich, Switzerland;

Doctoral Thesis Co-Advisor:

(1) Bing Shao, ECE Department, University of California, San Diego, CA

Postdoctoral-Scholar Sponsor

(1) Dr. Lee Wey Yang, Harvard University.
(2) Dr. Dora Toledo Warshaviak, Schrodinger Inc.
(3) Dr. Jose Candelario, La Jolla Bioengineering Institute.
(4) Dr. Srinivas Alla, UT MD Anderson Cancer Center.

Academic Internship Advisor for UCSD undergraduate students:

Sarah Widner, Kalli C. Catcott, Leah Clemmer, Michael Mueller, Hesam Tavakoli, Nicole Baumgartner, Francisca Ryani, Saurabh Rane, Nicholas Johnsen.

Patents

1. Methods and apparatus for sorting cells using an optical switch in a microfluidic channel network, United States 7,745,221, Issued on June, 2010.
2. Separation and manipulation of a chiral object, United States 7,935,906, Issued on May, 2011.
3. Methods and apparatus for sorting cells using an optical switch in a microfluidic channel network, United States 8,426,209, Issued on April, 2013.
4. Separation and manipulation of a chiral object, United States US 8,698,031, Issued 2014.
5. Methods and apparatus for optophoretic diagnosis of cells and particles, United States 20040067167, Filed on April, 2002.
6. Enhancing phoretic separation, United States 20090188800, Filed on January, 2009.
7. Moving a small object in a direction, United States 20090239281, Filed on March, 2009.
8. Enzymatic or organic catalytic chemical reactions, United States 20100120087, Filed on January, 2010.
9. Asymmetric systems, United States 20100190198, Filed on August, 2009.
10. Renewable energy extraction, United States 20120006027, Filed on July, 2011.
11. Skin perfusion monitoring device, PCT/us2014/068909, Filed on December, 2014.
12. Cutaneous blood flow monitoring device, United States 62162597, Filed on May, 2015.
13. Chiral separation and analysis by molecular propeller effect, United States, Filed on June 2015.

List of Publications

52 original peer-reviewed research papers. Multiple papers cited over 200 times.
